

Updating your Glass Wall Systems website

A plain-English guide to your admin panel — what you click, and exactly where it shows up on the live website. No technical knowledge needed.

THE BIG PICTURE

Two sides of the same website

Your website has a **front** and a **back**. You work on the back; your visitors see the front. When you save a change on the back, the front updates on its own.

Think of it like a shop window. The admin panel is the storeroom where you arrange things; the website is the window the public looks through.

The golden rule

Almost everything in the admin panel works the same way. Once you learn it once, you know the whole system:

- 1 **Find it** in the left menu (the sidebar). Each part of the website has its own item there.
- 2 **Add** a new entry, or open an existing one and **Edit** it.
- 3 **Fill in** the boxes — a name, some text, maybe an image.
- 4 **Save**. That's it — the matching website page now shows your change.

TIP Two little switches appear on most items. **Active / Inactive** decides whether the public sees it — set something to Inactive to hide it without deleting it. **Priority** is just an order number: smaller numbers show first.

Products

Products are organised in **two layers**: first the **categories** (the big groups), then the individual **products** inside each group. You always create the category first, then add products into it.

Layer 1 — Product Category

A category is a heading like *Façade & Curtain Wall Systems*, *Louvers*, or *Rain Screen Cladding*. Each one gets a name and a picture.

IN THE ADMIN PANEL

Products ▶ Category ▶ Add

- Type the **Category Name**
- Upload a **Thumbnail Image**
- Set **Active** and a **Priority** (order) number
- Press **Save**

ON THE WEBSITE

- A new card appears on the Products page: `/products`
- It also appears in the “**Our Products**” row on the **Home** page
- Clicking the card opens that category’s page

Layer 2 — Product Listing (the actual products)

Now you add the individual products *inside* a category — for example the different louver types under *Louvers*.

IN THE ADMIN PANEL

Products ▶ Listing ▶ Add

- Choose the **Category** from the dropdown
- Type the **Product Name** and upload an **Image**
- Set **Active** and **Priority**, then **Save**

ON THE WEBSITE

- The product shows on its category page: `/products/<category>`
- In the admin list, products are grouped under their category so they’re easy to find

The full journey a visitor takes: Home “Our Products” → Products page (categories) → a category page (the products in it).

Projects

Projects work just like Products, but with **three layers**: the **category**, the **project**, and then a detailed **project page** with all its facts.

Layer 1 — Project Category

IN THE ADMIN PANEL

Projects ▶ Category

- Groups like *Residential, Commercial & Hospitality, International*
- Add a **Name**, a **Thumbnail** and a **Priority**

ON THE WEBSITE

- Appears as a card on the Projects page:
`/projects`
- Also listed under the **Projects** menu at the top of every page

Layer 2 — Project Listing

IN THE ADMIN PANEL

Projects ▶ Listing

- Pick the **Category**, add the **Project Name**, **Location** and **Image**
- Tick **Show on Home** to feature it on the home page

ON THE WEBSITE

- Shows on its category page:
`/projects/<category>`
- Featured ones appear in “**Our Projects**” on the Home page

Layer 3 — Project Details

This is the individual project page — the one with the big photo and the fact sheet. You fill these fields:

FIELD YOU FILL IN	WHERE IT SHOWS
Client	All of these appear in the fact box on the project's own page / <code><category></code> / <code><project></code> — together with the project image and the scope-of-work list.
Architect	
Consultant	
Project Area & Floors	
Year	
Scope of Work	

The full journey a visitor takes: Projects page (categories) → a category page (projects) → one project's detail page.

Careers

The Careers area has **two things you edit** — the page text and the job openings — plus **one thing that comes back to you**: the applications people send.

Part A — Career Page Details (the page text & banner)

IN THE ADMIN PANEL

Careers ▸ Page Details

- Set the **Banner** heading & image, the intro **Section** text, and the description
- There is only **one** of these — you edit it, you don't add new ones

ON THE WEBSITE

- Fills the top and intro of the Careers page: `/careers`

Part B — Job Postings (the open positions)

IN THE ADMIN PANEL

Careers ▸ Job posting ▸ Add

- Add the **Job Role, Description, Location, Type, Experience, Qualification**
- Set **Active** to show it; set Inactive when the role is filled

ON THE WEBSITE

- Appears in the list of openings on `/careers`
- Each has an **Apply Now** button that opens the application form

Part C — When someone applies

A visitor fills the **Apply Now** form and attaches their résumé. Here's what happens automatically:

- 1 Their details and résumé are **saved** in your admin panel.
- 2 An **email** is sent to your team (with the résumé attached), and a **confirmation email** goes to the applicant.
- 3 You read it any time under `Enquiries ▸ Career Applications` — grouped by the job role they applied for.

NOTE You never lose an application even if an email fails — every submission is stored in the admin panel. The résumé can be downloaded from there.

WHERE MESSAGES LAND

Enquiries — your inbox inside the admin

Anything a visitor sends you arrives in one place, so nothing gets lost:

IN THE ADMIN PANEL

Enquiries

- **Contact Enquiries** — messages from the Contact Us form
- **Career Applications** — job applications (with résumés)
- Open any one to see the full details; download résumés here

FROM THE WEBSITE

- The **Contact Us** form: </contact-us>
- The **Apply Now** form on </careers>

You (and the applicant) also get an email each time — but the admin panel is the reliable record.

The other sections, in brief

These all follow the same **Find** → **Edit** → **Save** pattern you've already learned. Here's what each one controls and where it appears — no need to memorise, just know they're there.

ADMIN MENU	WHAT IT CONTROLS	WEBSITE PAGE
Home	Banner slides, About text, client logos, blog strip	/
Overview ▶ About Us	The About page content	/about-us
Overview ▶ Board of Directors	Director photos & bios	/board-of-directors
Overview ▶ Innovation	Innovation cards	/innovation
Overview ▶ ESG	ESG pillars, counters, EPD table	/esg
Overview ▶ Media	Corporate film + press PDFs	/media
Overview ▶ Awards	Award entries & their categories	/awards-recognition
Infrastructure	Design & Engineering, Project Management, Facility	those 3 pages
Investors Relations	IPO documents, DRHP, Annual Reports, Corporate Governance, Investor Resources	the Investors pages
Legal Pages	Privacy Policy & Terms text	/privacy-policy
Contact Details	Address, phone & email on the Contact page	/contact-us
Dashboard	A read-only summary — counts & recent enquiries. Nothing to edit here.	—

Most of these are a single page you edit, or a simple "Add / Edit / Save" list — exactly like Products.

A few simple rules

IF YOU WANT TO...	DO THIS
Hide something without deleting	Switch it to Inactive . It disappears from the website but stays in the admin.
Change what shows first	Lower its Priority number. Smaller number = higher up.
Add a picture	Use JPG, PNG or WEBP, ideally under 2 MB . The upload box tells you the limit.
See your change on the site	Save, then open the page and refresh (Ctrl + F5). Changes are instant.
Remove something for good	Use Delete — but remember Inactive is usually safer.

REMEMBER You can't "break" the website by editing content. Every item is separate, and hidden or deleted items never affect the rest of the page. When in doubt, set it to Inactive instead of deleting.
